

**Table 2: Percentage distribution of specificity and integration coding of autobiographical memory topic segments (N=5)**

		Clients →	A	B	C	D	E
<b>Specificity</b>	<b>Coding*</b>	<b>Summary</b>					
		<b>Generic %</b>	90.8	89.13	94.83	91.67	95.12
	<b>Summary</b>						
	<b>Episodic %</b>	4.6	4.35	1.72	5.56	0.00	
		<b>Single event %</b>	4.6	6.52	3.45	2.78	4.88
<b>Integration</b>	<b>Coding**</b>	<b>Integrated %</b>	17.24	0.00	1.72	0.00	4.88
		<b>Non-integrated %</b>	82.76	100.00	98.28	100.00	95.12

\*Specificity coding involved classifying topic segments (with complexity coding of 3 points or higher) into one of the 3 types- single event memories, summary episodic memories and summary generic memories.

\*\*Integration coding involved classifying topic segments (with complexity coding of 3 points or higher) into integrated or non-integrated memories.
